Introduction 2 Acknowledgment 7 Notations 7	
1. Bialgebras	8
1.1. Associative algebras	8
1.2. Coalgebras	12
1.3. Bialgebras	16
1.4. The tensor bialgebra	16
1.5. Bialgebra structure for $U(\mathfrak{g})$	17
1.6. Dual Hopf algebra	18
1.7. Cartier-Milnor-Moore theorem	19
1.8. Chain complex and homology	21
1.9. Unital infinitesimal bialgebras	24
2. Algebraic Operads	29
2.1. Algebras over an operad	33
2.2. Non-symmetric operads	34
2.3. Binary quadratic operads	35
2.4. Coalgebras over a operad	38
2.5. Koszul duality for operads	39
2.6. PBW basis for operads	42
3. Compatible associative algebras	47
3.1. Examples of associative compatible algebras	47
3.2. The free associative compatible algebra	49
3.3. Second product	50
3.4. The operad As^2	52
3.5. Koszul dual of As^2	53
3.6. Operadic homology for As^2 -algebras	54
4. Compatible infinitesimal bialgebras	57
4.1. Formula for the coproduct Δ	59
4.2. Structure theorem for compatible infinitesimal bialgebras	61
5. Matching Dialgebras	68
5.1. The free matching dialgebra	69
5.2. Bi-matching dialgebras	71
5.3. The Goncharov's Hopf algebra	73
5.4. Notion of compatible infinitesimal bialgebra in matching dialgebras	74
5.5. As - Com^2 -operad	76
6. The operad As - Com^2	77
6.1. Basis for As - Com^2	77
6.2. Dimension of As - $Com^2(n)$	85
7. Compatible commutative algebras	85
7.1. The dual of Com^2	86
7.2. A PBW basis for Lie^2	87

8. A PBW basis for Com_2	88
8.1. Algorithm for PBW basis	90
8.2. Bijection between In and Sn	93
9. Operadic homology for compatible commutative algebras	95
References	97
